

FULL THREAD SOCKET HEAD CAP SCREWS # 912FULL 12

Modified Ref: DIN 912/ISO 4762

Material: Steel - Property Class: 12.9 - Tensile 1,200 Mpa (174,000psi)

*Please note: According to DIN 912 & ISO 4762 the "recommended" thread length for metric socket head cap screws is 2x the diameter plus 12 mm. Because many of our customers have needs that require longer thread lengths, we have decided to stock a modified, full thread version of the DIN 912 standard in addition to our "normal" product line (in 12.9 alloy steel only). The way these sizes are listed below reflects the European method for indicating "full thread". Although it appears somewhat repetitive, ordering this item exactly as it appears in the chart below is important to guarantee that you receive this special full thread version.
